

# YOU'VE GOT THE POWER.

SAVE ON ENERGY-EFFICIENT HEATING,  
COOLING AND WATER HEATING EQUIPMENT,  
WITH **REBATES UP TO \$1,500.**

**Consumers Energy**

*Count on Us®*

Consumers Energy recognizes that energy-efficient equipment has a higher initial investment, and we want to help you with that expense by offering you rebates up to \$1,500. Then, you can invest in higher efficiency equipment, which will help you save on your energy bill, protect the environment and give you peace of mind with safe, dependable equipment. Together, we can make a difference.

## HOW CAN I GET A REBATE FROM CONSUMERS ENERGY?

When you buy energy-efficient heating, cooling and water heating equipment through a participating heating and cooling contractor, you're eligible for rebates through the Consumers Energy Residential Heating, Cooling and Water Heating program. For example, you could get back up to:

- \$400 for a high-efficiency natural gas furnace
- \$1,500 for a natural gas boiler
- \$500 for a qualifying air conditioning system
- \$50 for a heating or cooling comprehensive tune-up

Plus, you'll save on your energy costs. If your electric heat pump, furnace or air conditioning unit is more than 15 years old, you can save up to 20 percent on heating and cooling costs with a high-efficiency unit.\* The energy savings can add up fast!

## HOW MUCH WILL MY REBATE BE?

The amount of your rebate depends on the type of equipment you install. The higher the efficiency, the bigger the rebate.

What's more, equipment may be combined to qualify for multiple rebates. For example, a customer with combination natural gas and electric service could get a qualifying 97 percent AFUE natural gas furnace (\$400 rebate) with an electronically commutated motor (\$50 rebate), a 21 SEER air conditioning system (\$500 rebate) and a Wi-Fi thermostat (\$100 rebate) for a total of \$1,050 in rebates!

For a complete list of current rebates, visit **ConsumersEnergy.com/myhome**.

## WHAT ARE THE REQUIREMENTS TO PARTICIPATE?

- Only Consumers Energy customers are eligible for this program. If you apply for a rebate on natural gas equipment, you must be a natural gas customer. If you apply for a rebate on electric equipment, you must be an electric customer. If you are a combination natural gas and electric customer, you are eligible for both natural gas and electric rebates.
- The equipment that the contractor installs must meet program eligibility guidelines.
- Only participating heating and cooling contractors, listed on **ConsumersEnergy.com/myhome**, are approved to submit an application for a rebate.

## WHAT ARE THE BENEFITS OF THE PARTICIPATING CONTRACTOR NETWORK?

Consumers Energy provides participating contractors with extensive program training to ensure customers receive the best service. Your heating and cooling contractor will fill out your paperwork and submit the rebate application on your behalf.

The contractors listed on our website are licensed and trained in quality assurance, program requirements and application submission.

Participating contractors will ensure:

- Equipment is properly sized to your home and installed to provide the efficiency and performance it was designed to deliver.
- Minimum equipment specifications have been met for rebate qualification.
- Your rebate application is submitted properly for efficient processing.

## HOW LONG WILL IT TAKE TO RECEIVE MY REBATE?

You should expect your rebate from Consumers Energy within six to eight weeks of the date your application is received. To check the status of your rebate application, you can call us at 866-234-0445 Monday through Friday, 8 a.m. to 5 p.m.
