

## CONSUMERS ENERGY INTRODUCES DUCTLESS MINI-SPLIT HEAT PUMPS

The Consumers Energy Heating, Cooling and Water Heating (HVAC) program is pleased to announce the introduction of **ductless mini-split heat pumps** to the rebate eligibility lineup.

Ductless mini-split heat pump systems are a great alternative to electric resistant heat. With SEER efficiencies at 21 SEER and higher, they outperform older heat pumps systems. The 21 SEER heat pumps are available for any home that is primarily heated with electric heat and can lower your customer's electric bills, while providing comfortable zoned heat.

Some models can service as many as eight different zones and can effectively replace both existing ducted air-handler heat pump, and any form of resistance electric heat, such as electric baseboards, electric furnaces, electric radiant panels, etc.

Rebates will cover replacing an existing heat pump or an existing electric resistant heated home. Heat pumps 21 SEER and higher will be eligible for a **\$500 rebate** for installations on or after **September 1, 2017**.

Thank you for your continued support of the Consumers Energy HVAC program! Please contact your HVAC Account Manager or the Account Advocate Team for extra support.
